512th Airlift Wing, Dover Air Force Base, Del.

## Dover delivers

Ashley Forrest sings *The Star-Spangled Banner* while Dover Air Force Base, Del., representatives render a salute during the 5-hour Energy 200 pre-race ceremonies June 2, 2012, at Dover International Speedway, Del. A C-17 Globemaster III flown by members of the 512th Airlift Wing from Dover AFB performed a fly-over during the national anthem. Air Force members had an active presence at the speedway during race weekend. (U.S. Air Force photo by Tech. Sgt. Chuck Walker)

## 512th reservist shares gift of poetic healing

**2nd Lt. Lori Fiorello**  
Air Force Mortuary Affairs Operations

DOVER AIR FORCE BASE, Del. -- As a child, she climbed mango and coconut trees in her backyard to satisfy her hunger. Now, she is working on publishing her third book to feed her appetite for helping others.

Tech. Sgt. Enid J-Ellis, C3 technician with Air Force Mortuary Affairs Operations, moved to the United States as a child and embraced the American Dream with a life of hard work, dedicated to healing those who grieve with the written word.

"I want to help people process their pain before leaving here," said J-Ellis.

During one of her deployments here, J-Ellis experienced the loss of loved ones back home, but put service before self to tend to the mission. Upon returning home, the pain of those losses finally set in.

To help cope with the pain, J-Ellis

turned to writing poems, a passion she found at age 12.

"My poetry is inspired by life's events, meetings I have with other people, but for the most part, a lot has stemmed from working at AFMAO and the pride I have in serving my country," she said.

Her poem "The Knight in American Armor" was inspired by a childhood friend who joined the U.S. Army and deployed during Operation Desert Storm. She has since dedicated the poem to all service members defending the country in times of war.

She said the service the AFMAO team provides to fallen heroes and their families is not an easy mission; she seeks to provide strength to others here through her writing.

**Tech Sgt. J-Ellis**

"The people who take care of the fallen and the families of the fallen need consoling and empathy too," said J-Ellis, "This is my way of giving a gift back to them. I want to be the beacon of hope to someone else."

J-Ellis is studying at the Pittsburgh Institute of Mortuary Science with a goal of becoming a licensed mortician by January.

"The mission here has done so much for me," said the Moroccan-born writer. "It has inspired me so much that I now have the ultimate goal of owning my own funeral home."

**Command names Key Spouse of Year**

the 1990s, the number of people in the UK who are employed in the public sector has increased from 10.5 million to 12.5 million, and the number of people in the public sector who are employed in health care has increased from 2.5 million to 3.5 million (Department of Health 2000).

There are a number of reasons for this increase. One of the main reasons is the increasing demand for health care services. The population of the UK is ageing, and there is a growing number of people with chronic conditions such as diabetes, heart disease, and cancer. This has led to an increase in the number of people who need to be treated in hospitals and other health care settings.

Another reason for the increase is the expansion of the public sector. The government has invested heavily in health care over the past few decades, and this has led to an increase in the number of hospitals, clinics, and other health care facilities. This has created a need for more health care workers to staff these facilities.

Finally, there is a growing awareness of the importance of health care workers. The public has become more health conscious, and there is a greater emphasis on preventing illness and promoting good health. This has led to an increase in the number of people who work in health care, as well as an increase in the number of people who are trained to become health care workers.

There are a number of challenges facing the health care system in the UK. One of the main challenges is the shortage of health care workers. There are not enough health care workers to meet the demand for services, and this is leading to long waiting lists and a decline in the quality of care. Another challenge is the increasing cost of health care. The government is spending more on health care than ever before, and this is putting a strain on the public purse.

There are a number of ways in which the health care system can be improved. One way is to increase the number of health care workers. This can be done by increasing the number of people who are trained to become health care workers, and by encouraging more people to work in health care. Another way is to reduce the cost of health care. This can be done by increasing efficiency and reducing waste.
